AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1. (Currently amended) An appendage that laterally extends from a mobile apparatus for treating a surface, said appendage comprising an elongate flaccid body having a proximal end which remains in fixed relationship relative to said mobile apparatus and a distal end remote therefrom, said body being movable in the horizontal plane whereby said distal end moves relative to said mobile apparatus and biased downwardly toward the treatment surface causing said body to contact the treatment surface and to collect dust and debris from the treatment surface.

Claim 2. (Original) An appendage according to claim 1, wherein said body is made of a flexible material.

Claim 3. (Canceled)

Claim 4. (Previously presented) An appendage according to claim 1, wherein said appendage being pivotally attached to said mobile apparatus.

Claim 5. (Previously presented) An appendage according to claim 1, wherein said appendage is translationally attached to said mobile apparatus, whereby said appendage is capable of translational movement in the horizontal plane relative to the apparatus.

Claim 6. (Original) An appendage according to claim 1, wherein said first side having a rim disposed along a peripheral edge of said body, said rim extending upwardly from said first side, whereby said rim providing the downwardly bias of said body.

Claim 7. (Previously presented) An appendage according to claim 2, wherein said body having a length less than about 15.5 cm.

Customer No. 27752

Claim 8. (Original) An appendage according to claim 1, wherein said appendage having an aspect ratio of at least 4.

Claim 9. (Currently amended) An appendage that laterally extends from a mobile apparatus for treating a surface, said appendage comprising

an elongate body having a proximal end which remains in fixed relationship relative to said mobile apparatus and a distal end remote therefrom including a top face and a bottom face, said body being movable in the horizontal plane whereby said distal end moves relative to the mobile apparatus and biased downwardly toward the surface;

at least one sheet holder connector attached to said top face of said body;

a compliant pad attached to said bottom face of said body; and

a cleaning sheet, whereby said downwardly biased body causing said sheet to come in compliant contact with the surface and collect dust and debris from the surface.

Claim 10. (Previously presented) An appendage according to claim 9, wherein said top face of said body comprises a rim disposed along a peripheral edge of said body, said rim extending upwardly from said top face, whereby said rim providing the downwardly bias of said body.

Claim 11. (Original) An appendage according to claim 10, wherein said body is made of a flexible material.

Claim 12. (Canceled)

Claim 13. (Previously presented) An appendage according to claim 10, wherein said appendage being pivotally attached to said apparatus.

Claim 14. (Original) An appendage according to claim 10, wherein said body is telescoping.

Claim 15. (Previously presented) An appendage according to claim 10, wherein said body of said appendage is integral to a sheet holder body located under the mobile apparatus.
